Abstract:

GlobalRentalToken is a project that will provide brokerage services for rent vehicle between customers and vehicle rental companies from all over the world. The vehicle rental companies will add their own vehicles to the Global Rental application and they will get payment with the GRT token. Also customers will be able to rent a car easily by paying with GRT token.

Blockchain Introduction:

Blockchain builds on the idea of P2P networks and provides a universal data set that every actor can trust, even though they might not know or trust each other. It provides

It provides a shared and trusted ledger of transactions, where immutable and encrypted copies of information are stored on every node in the network. . Economic incentives in the form of native network tokens are applied to make the network fault tolerant, and attack and collusion resistant.

The blockchain network has no central authority — it is the very definition of a democratized system. Since it is a shared and immutable ledger, the information in it is open for anyone and everyone to see. Hence, anything that is built on the blockchain is by its very nature transparent and everyone involved is accountable for their actions.

Blocks on the blockchain store data about monetary transactions—we've got that out of the way. But it turns out that blockchain is actually a pretty reliable way of storing data about other types of transactions, as well. In fact, blockchain technology can be used to store data about property exchanges, stops in a supply chain, and even votes for a candidate.

GlobalRentalToken Introduction:

People usually go to local rental companies and they have to pay much more money. In GlobalRentalToken application users can choose language and they can find alternative companies. Payments will be with GRT and rental commission will be lower. With GlobalRentalToken application users can rent most popular vehicles such as scooters, boats, bicycles, cars. In GlobalRentalToken application there will be global companies and users can rent vehicles all around the world. Rental vehicles are way to save the world from economic and environmental problems based on sharing consensus.

Blockchain powered GlobalRentalToken platform is safer than other systems. Users can rent vehicles with GRT but if user does not have GRT, can buy GRT from GlobalRentalToken platform with credit card. Our purpose is creating the biggest rental ecosystem with Blockchain. There will be GlobalRentalToken Mobile Application for Google Play and Apple Store. In mobile application users will rent vehicles with advanced search. Users will vote companies after experiment. Customers will follow their vehicles with GPS and they will see total GRT earnings. GlobalRentalToken platform shares detailed datas with companies but does not shares user personal information.

Tokenomics:

- Team & Advisors
- Project Development
- Airdrop & Marketing
- Staking
- Institutional Sales Fund

GlobalRentalToken will release a total of 30,000,000,000 tokens and will not generate any more tokens.

Roadmap:

Q4 2019

- Global Rental Token idea was developed.
- Launching of Website.
- Social media activities were completed.

Q2 2020

- Partnership announcement.
- Starting of Bounty.
- GRT token SWAP.

Q4 2020

- High volume exchange listing.
- Mobile application release.
- Starting of Staking.
- Product Development.
- Whitepaper and Roadmap update.

Q1 2020

- Exchange listing.
- Marketing developments.
- CoinMarketCap listing.

Q3 2020

- Expansion of our team for asia and europe markets.
- High volume exchange listing.
- MVP release.

Summary:

**GlobalRentalToken builds on Ethereum network.
GRT is a ERC-20 token. GlobalRentalPlatform will use
GRT for payments. GRT is the official token of
GlobalRentalPlatform. GlobalRentalToken mobile application
will release on *Q4 2020***
